

MST-BAR® High-Mod™

High Modulus Glass Fiber
Reinforced Polymer (GFRP) Rebar

Higher Strength = Cost Saving

Over 2x stronger tensile strength than grade 60 steel rebar allows for less bar with same performance

Corrosion-Proof Reinforcement

Zero rust, zero spalling, eliminates costly rehabilitation and maintenance

200+ Years Service Life

Engineered to extend the service life of your reinforced concrete for centuries

Quick & Simple Installation

Up to 50% labor savings compared to installing traditional steel rebar

Transportation Savings

Weighs 25% the weight of steel rebar. One truck of MST-BAR® replaces four truckloads of steel

High Performance in All Climates

Stronger reinforcement in freeze-thaw regions & guaranteed longevity in coastal regions

Save On Concrete

No corrosion inhibitor, use chloride-based accelerants, reduced footing volumes

No Waterproofing

Eliminates need for costly waterproofing agents and epoxy coating necessitated by rust-prone steel rebar

MST-BAR BEND™ Technology

Fastest turnaround time for factory fabricated bent bars. Our proprietary corrugated sleeve achieves any bend possible

Nonconductive & Nonferrous

Ideal for projects with electro-magnetic sensitivity

High Chemical Resistance

High alkaline resistance. Impervious to de-icing salts and other harsh chemical attacks

Environmental Sustainability

Environmentally friendly manufacturing leaves a fraction of the carbon footprint left by steel mills

High Fatigue Resistance

20x higher resistance under cyclical loading compared to traditional steel rebar
